SUCCESS STORY

GÖTZ FAMILY HOME
Wetzlar-Hermannstein, Germany

ENVIRONMENTALLY FRIENDLY FUTURE

Hans Peter Götz had been getting information about practical ways of securing his family’s future in a sustainable manner – preferably in combination with the family home – for some time. Photovoltaic systems seemed like a good possibility, especially as this allowed the family to combine it with their commitment to the environment.

The final decision was made when he saw the solar installation of a work colleague, who was not only very satisfied with his investment, but was already earning money with it. Just three days after their discussion Hans Peter Götz had made up his mind.

The Götz family planned their solar installation together with GeckoLogic and within just four weeks after the first meeting the system was installed on the roof of their house with modules from Yingli, as history shows on average they provided the best performance.
We’re more than happy with our solar installation

“Of course, I had been getting information about photovoltaic systems for some time. You read a lot about the subject. But I only really became convinced when a colleague at work told me about his own experiences and the money he was earning with his solar installation. We found the perfect partner in GeckoLogic, who gave us excellent advice in all the important issues. When it came to choosing the solar modules we also listened to GeckoLogic’s recommendations to use Yingli modules for our installation. We haven’t regretted it in the slightest after all, the day-to-day earnings in black and white just show what the modules are capable of.”

– Hans Peter Götz

THE MOST IMPORTANT BENEFITS OF THE SYSTEM

– Financial independence due to a guaranteed 20 years of compensation for electricity fed into the grid from photovoltaic systems

– Environmentally friendly energy recovery can be an effective contribution towards reducing your own energy costs and also to conserve resources

– No special conversion work necessary in the house, as the cables and inverters could be installed in the cellar, which gave the owners more space

– The solar installation was commissioned within just four weeks

– Because of the dimensions of the solar installation Yingli modules fitted ideally into the plan

– Yingli modules exceed the predicted energy yield
